

VOD Encoder Features

» Multi-platform output

Choosing to convert your video files using VOD Encoder will guarantee that the person who receives a converted video file from you will be able to see it. All the converted files can be played right away on PCs, MACs and cell phones.

» Keep the video quality as high as initial file

While converting the video file VOD Encoder uses a multi-threading technique, keeping in the same time the highest video quality possible, making it one of the fastest double-pass encoder on the market today.

» HTML5, Roku and Mobile ready encoded!

Get your files transcoded simultaneously into webm and mp4- ready for web, STB or mobile devices!

» Encode any format

VOD Encoder is the solution to convert almost any known video format into .mp4, .flv or .webm which can be easily streamed.

» Video Stitching

Encode while you stitch as many videos as you want! The User interface allows for frame accurate video stitching of all input formats!

» User-friendly interface

Just point, click and send your video to VOD Encoder. The VOD will notify you when the video conversion process is over and your file is ready to preview and publish.

» Video format not supported? We customize VOD for your needs!

The video converter solution from VOD Encoder is flexible, so no worries if you don't find your file format in the list! We can customize for you and make VOD support your video file transcoding as well!

» No codec needed

VOD Encoder works with all Content Delivery Solutions and may be custom configured to support your business needs. While using the video encoder no audio codec or video codec are needed.

» Various Screen Sizes Supported

Transcode to low or High Definition quality file for all your video streaming needs.

» No proprietary Equipment needed

We use the latest technologies for transcoding. All process occurs on the server, so feel free to use your technical assets upon your wish.

» No limits for video size

As opposite to other video converters on the market, with VOD Encoder there are no limitations for video size. It can encode any file size- from few seconds to hours.

» Encodes and deliver faster than real time

Double-pass video- audio encoder from Eyepartner saves you time and money due to speed of processing your video file.
